BULLETIN MCS 1802

June 5, 2018

Installation of Remote Monitoring Systems

The State of Nevada has seen an increase in the installation of Remote Monitoring Systems for elevators. These systems have the potential to be very beneficial for industry as well as the riding public; they can shorten response time to incidents, keep better record of faults, and provide other important data points. The Mechanical Compliance Section supports the installation of Remote Monitoring Systems.

Pursuant to NAC 455C.402, an alteration is defined as **“any change, other than maintenance, repair, or replacement to the equipment of an elevator, including its parts, components, and subsystems.”** Adding remote monitoring capability to an elevator is a change. The method for obtaining an alteration permit is set forth in NAC 455C.506. Specifically, **“A contractor who is required to obtain a permit pursuant to subsection 1 must submit to the Mechanical Compliance Section not less than 10 business days before commencing the construction, installation or alteration a request for the permit that is accompanied by plans, drawings, a maintenance control program and specifications in the form prescribed by the Mechanical Compliance Section.”**

Please contact this office with any questions.
