Industry-level estimates

- Incidence rates and numbers of nonfatal work-related injuries and illnesses are presented by industry and case types, including total recordable cases (TRC); days away from work, job transfer, or restriction (DART) cases; days away from work (DAFW) cases; and other recordable cases (ORC).
- Industry-level estimates for nonfatal injuries and illnesses combined and for injuries only are presented per 100 full-time workers for incidence rates and rounded to thousands for numbers of cases. Industry-level estimates of illness cases are presented per 10,000 full-time workers.

Case circumstances and worker characteristics

- Estimates of case circumstance and worker characteristics are presented for the subset of cases that resulted in days away from work (DAFW).
- Case circumstances include event or exposure, source, nature of injury or illness, part of body, day of week and time of incident
- Worker characteristics include occupation, gender, age, and race
- DAFW incidence rates are calculated per 10,000 full-time equivalent workers and case counts are rounded to the nearest ten.

NOTE:

- More information on the Survey of Occupational Injuries and Illnesses (SOII) can be found in the BLS Handbook of Methods at www.bls.gov/opub/hom/soii/home.htm.
- Data users are cautioned to take into account the different levels of precision when analyzing estimates presented in these charts.
