2021 Survey of Occupational Injuries and Illnesses (SOII) Annual Survey Charts

NEVADA DEPARTMENT OF BUSINESS AND INDUSTRY
Nevada Division of Industrial Relations

Bureau of Labor Statistics Unit

Industry-level estimates

- Incidence rates and numbers of nonfatal work-related injuries and illnesses are presented by industry and case types, including total recordable cases; days away from work, job transfer, or restriction cases; days away from work cases; and other recordable cases.
- Industry-level estimates for nonfatal injuries and illnesses combined and for injuries only are presented per 100 full-time workers for incidence rates and rounded to thousands for numbers of cases. Industry-level estimates of illness cases are presented per 10,000 full-time workers.

Case circumstances and worker characteristics

- Estimates of case circumstance and worker characteristics are presented for the subset of cases that resulted in days away from work.
- Case circumstances include event or exposure, source, nature of injury or illness, part of body, day of week and time of incident.
- Worker characteristics include occupation, gender, age, and race.
- DAFW incidence rates are calculated per 10,000 full-time equivalent workers and case counts are rounded to the nearest ten.

Estimates for case circumstances and worker demographics for cases involving days away from work as well as days of job transfer and restriction are not published in this release. In the Fall of 2023, these estimates will begin biennial publication every two years beginning with the two-year 2021-2022 reference period.

Notes:

- More information on the Survey of Occupational Injuries and Illnesses can be found in the BLS Handbook of Methods at www.bls.gov/opub/hom/soii/home.htm.
- Data users are cautioned to consider the different levels of precision when analyzing estimates presented in these charts.

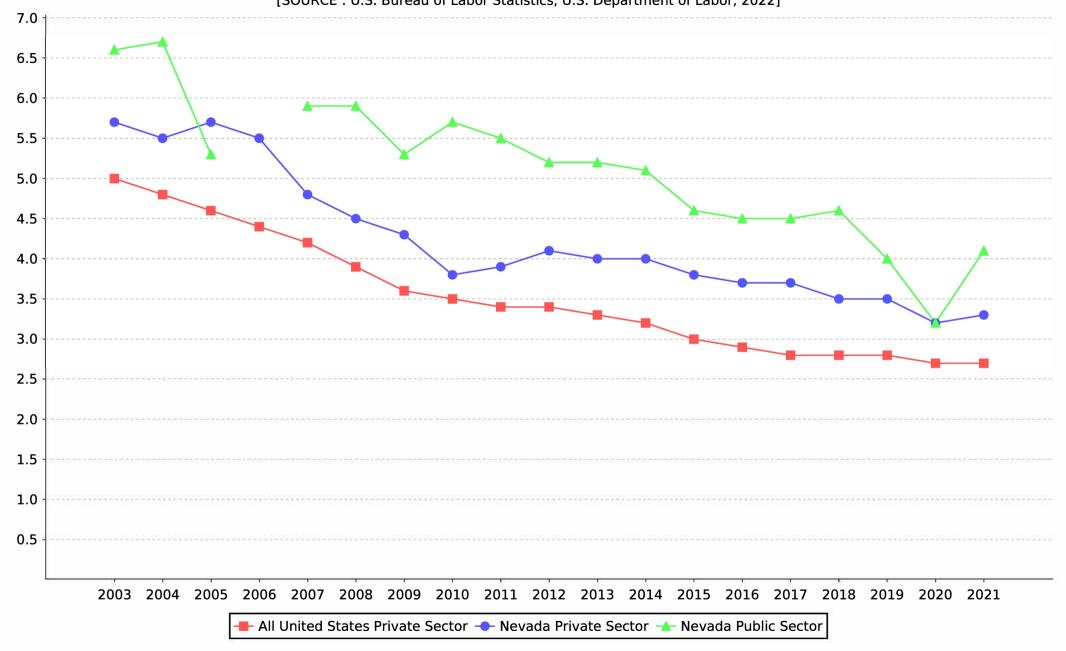

TABLE OF CONTENTS
